

Making Mosaic Cabochons

This is a good way to get rid of slabs that are too thin to make cabochons. Make sure they are perfectly flat by removing any high edges. Wash slabs to remove any oil or dirt. Glue slabs together using 2-part epoxy glue. Use C-clamps to press the slabs tightly and remove air bubbles.

When completely dry, clamp in saw vise and slab as you would any other rock.

Make new cabochons from your new slabs.
